Our Process

- 1. Complete Intake Paperwork**
We will send you new client intake paperwork to sign through our electronic signature platform.
- 2. Verification of Benefits**
We complete the verification process through your insurance provider.
- 3. Authorize an Assessment**
We request an assessment authorization through your insurance provider. This can take up to 30 days.
- 4. Assessment**
The Clinical Supervisor and parent(s) will schedule a time for the Clinical Supervisor to complete an assessment on your kiddo.
- 5. Build the Treatment Plan**
The Clinical Supervisor will create a personalized six-month treatment plan for your kiddo.
- 6. Authorization for Treatment**
We request a treatment authorization with the newly produced Treatment Plan through your insurance provider. This can take up to 30 days.
- 7. Case/Schedule Coordination**
Our Case Coordinator will be in touch with parents to confirm treatment hours and to arrange the start of services - including assigning a Registered Behavior Technician who will deliver treatment. **Then ABA Services Begin!**

Our Services

- 1. Behavior Analysis & Assessment**
- 2. Parent/Staff Training**
- 3. Data Monitoring Planning**
- 4. Implementation Monitoring**
- 5. Skills Acquisitions**

Our Mission

Our Mission is to create a better world by helping children and families to improve their day to day lives. We believe that therapy should be fun, evidence based, and consistent.

ABA therapy at Synergy Behavioral Services is individualized for each child. Each program element is customized to the child's specific needs, skills, interests, preferences, goals, and family desires.

This is why an ABA program is completely different from child to child. The rates of change and acquisition will vary from one child to another, along with the overall rate of progress.

Why ABA Therapy?

The ABA therapy procedures used at Synergy Behavioral Services have been thoroughly researched and found to be effective and strongly supported by the scientific community. ABA therapy is recommended and supported by the Surgeon General and the American Academy of Pediatrics, among other reputable organizations.

Research supports that some children who participate in early intensive ABA therapy often acquire skills that allows them to participate in mainstream classroom environments with little to no ongoing aid. ABA Therapy emphasizes using only evidence-based, scientific methods and many children who received ABA therapy:

1. Improved their quality of life
2. Learned to function in the community
3. Held jobs later in life
4. Developed lasting personal relationships
